

HALOVOXX

Quality. Capability. Value.

Most industry experts agree that the end is near for the business phone closet. It's time to expect truly integrated voice and data services. Truly "converged", expertly delivered, aligned with your ever changing business needs with flat, predictable, value pricing. It's time for your business to partner with HALOTEQ. We have the experience necessary to make you sound great, while enabling your business to take advantage of the capabilities and cost savings of business quality "voice as a service" (VaaS).

There are scores of companies who say they provide Hosted PBX and VoIP services but all providers are not alike. If all they provide are voice services you will be left with the same integration challenges you face today. And if they lead with "fit your business into my system," or low prices and a narrow feature set as their value proposition, you should keep searching for a better provider.

Leading with quality and feature rich capabilities before cost savings is better for your business, and is a time-tested model for success. With all that said, HALOVOXX pricing is extremely competitive, and our customers can attest to the great value that HALOVOXX delivers every day.

HALOVOXX – It's Just Better Business Business Continuity

HALOVOXX offers your business complete business continuity with traditional telecommunications solutions and providers. Our business continuity services offer your organization the ability to function even after a disastrous event. This is accomplished through the deployment of redundant hardware and software, the use of fault tolerant systems, as well as a solid backup and recovery strategy based on industry best practices.

Just a Few Features:

- HALOVOXX servers are centrally managed at highly redundant facilities. Just as important, you can simply move your phones to a new location with connectivity, and you are back in business.
- Automatic re-routing of calls in the event of an outage. HALOVOXX offers the ability to have your calls automatically re-routed in the event of local service outage. That means you remain in contact with your customers.
- Redundant connectivity options are available for mission critical voice communications. HALOVOXX customers can implement a number of proven solutions such as redundant broadband connections and redundant provider solutions to assure maximum uptime and voice communications.

Lead with Quality, then Capability & Value

Compare Us

Many of our customers learn about us from our current customers, or by searching the Internet for a Hosted PBX or VoIP provider. They quickly find that there are a number of low-end Hosted PBX and VoIP providers that are fine for

residential and micro-business users (under 5 users), but when you need an enterprise class, reliable and scalable Hosted PBX and VoIP solution, HALOVOXX stands alone.

Here is a sample of eight comparison items for consideration:

Competitive Comparison	HALOVOXX	National VoIP Providers	Interconnects
Hosted PBX comparable to high-end installed PBX	YES	Limited	NO
Business quality VoIP	YES	NO	NO
Ability to custom configure features/functions	YES	NO	YES
Easy to use enterprise capabilities, without expensive hardware, software and professional services (i.e. no more phone closet)	YES	NO	NO
Pay Per Device (PPD) or Pay Per Company (PPC) plans	YES	Limited	NO
Ability to scale from 5 to 1000+ users	YES	NO	NO
Infrastructure based on 3rd party proprietary (expensive) software	NO	YES	-
Infrastructure utilizing best-of-class technologies (i.e. Cisco, Intel, etc.) with 100% control on roadmap features and functions based on customer requirements	YES	NO	-

Note: National VoIP Providers are companies marketing to the entire US without a local presence or regional focus. Interconnects are companies who sell customer premise based phone systems (hardware, software, and labor).

HALOVOXX Makes Your Business Sound Great!

Quality of Service

When you sound great, and don't have to think about your phone system, you can focus on more important things like growing your business. Quality of service (QoS) is something that is easy to talk about, but very difficult and complex to deliver. While many companies talk about voice quality, HALOTEQ has invested in the talent and technology required to deliver on the promise.

End-to-End Quality

From our crystal clear sound, based on a state of the art network and VoIP optimized infrastructure, to our Voice Management Device for assuring that your data network is optimized for Hosted PBX and VoIP services, HALOVOXX is 100% focused on quality, reliability, and business continuity. Customers from 5 users to 1000+ with multiple locations rely on HALOVOXX every day. Doctors' offices, car dealers, consultancies, wholesalers and even call centers rely on HALOVOXX to manage their communications services.

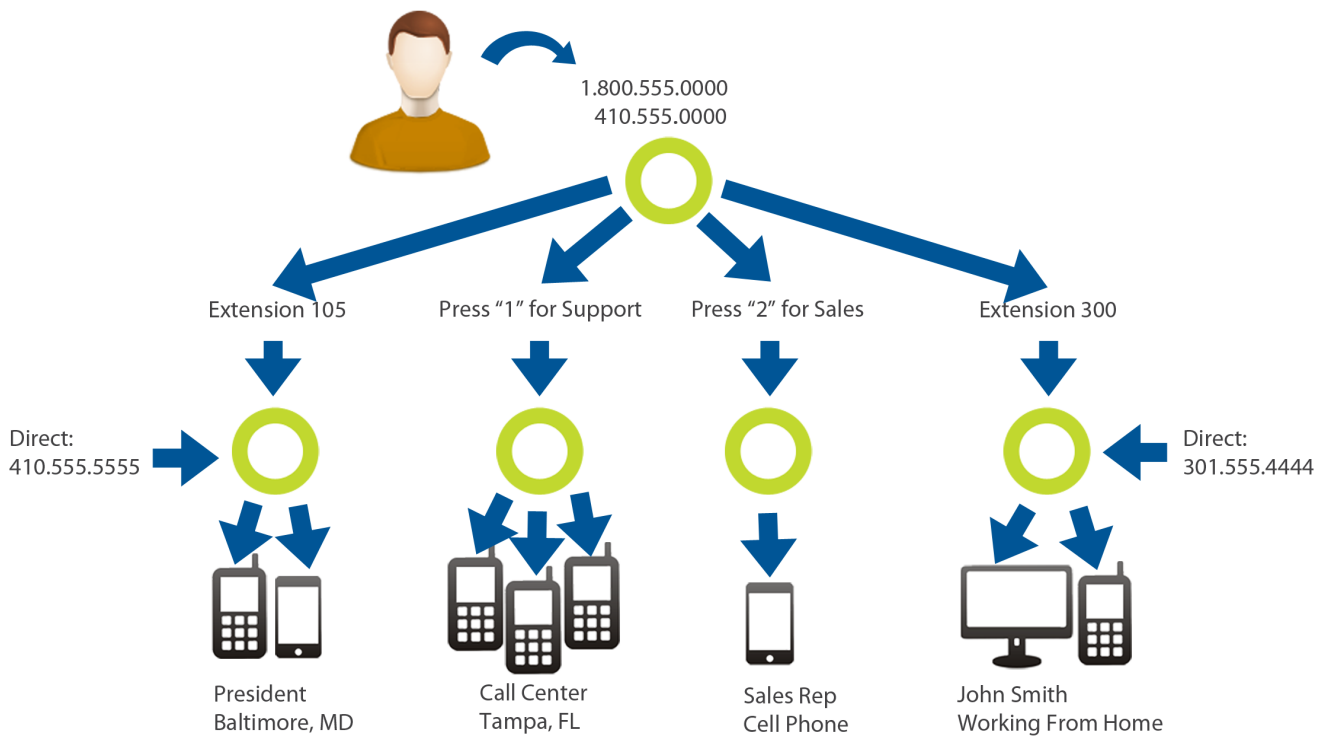

Communicate Seamlessly from Anywhere!

Multiple Offices - Mobile Workers

Companies with more than one office and/or mobile workers will realize even greater benefits from HALOVOXX services. Eliminate the need for expensive and complex networks, hardware, and software, and make it simple to connect all your offices and employees.

Each office simply gets a business class broadband connection (either through HALOTEQ or another provider of choice), the number of handsets required and a HALOVOXX Voice Management Device (VMD - to ensure QoS) and everyone is connected. Best of all you manage all offices and users through a standard web browser (or a mobile device such as a Smartphone). Gone are the days of complex multiprotocol label switching (MPLS) networks and costly network management equipment.

"Mobile" or work at home employees with a standard broadband connection (DSL, Cable, or FIOS), can become an extension of your corporate phone system. Simply plug the phone into the home network, and start making calls. *(Mobile workers need to make certain they have a reliable broadband connection and a small HALOVOXX VMD may be recommended for power users)*

Your Number Is Yours To Keep!

Managed Telephone Number Porting

Another major advantage of HALOVOXX Hosted PBX and VoIP services is that when you move your office, you get to keep your numbers. Really! The big old telephone companies will force you to switch numbers if you move a block away, but with today's advanced VoIP technology, you get to keep your business phone number forever...no matter where you go in the United States.

Most of our customers have a vested interest in their existing phone numbers. To avoid reprinting business cards, letterhead and marketing materials, and to avoid having to notify customers and business partners of a phone number change, HALOTEQ will accommodate porting (moving) your number to our HALOVOXX service. And we'll handle everything. We just ask you to fill out a form, and send us a copy of your latest invoice, and we do the rest.

Direct Inward Dial (DID)

HALOVOXX also offers your business the option of having unique Direct Inward Dial (DIDs) numbers for each user, just specific users, or you can have one published number that your customers call and provide a unique phone extension for each of your users and departments. HALOVOXX also enables you to control the number that your customers see when you call ("caller ID").

By the Seat or Buy a Pack...

Flexible, Flat Rate Pricing

HALOVOXX is priced by the seat starting at just \$34.95/month with unlimited US and Canada calling. Clients can also buy HALOVOXX in multiples of 20 seats at a discount to the single seat subscription at each 20 unit break point. Hardware is additional but can be bundled into the monthly subscription as an option.
